### **Esperance Power Project Community Open Day**

***Community members are invited to come along and learn about this exciting project, meet the project team and find out about supplier and job opportunities.***

***Friday, 11 September 2020***

***12:00pm – 6:00pm***

***Reception Room, Esperance Civic Centre***

## **EVOL LNG to supply LNG to new low-emission Esperance power station**

EVOL LNG is pleased to announce that it has been selected to be the long-term supplier of liquefied natural gas (LNG) as part of a project to generate cleaner electricity for Esperance.

EVOL LNG is a Western Australian business and one of the nation's leading providers of LNG for remote power generation and marine transport. The business has been safely and reliably supplying remote power stations throughout Western Australia for more than 12 years.

The supply agreement with regional electricity supplier, Horizon Power, forms part of the Esperance Power Project aimed at reducing the town's carbon footprint and emissions by 50 per cent. The project involves the construction of a new power station fueled by LNG as well as other clean energy infrastructure, including a 9MW wind farm and a 4MW solar farm.

EVOL LNG Manager Nick Rea said the project demonstrates the role of LNG in complementing high-penetration renewables.

"The key advantage of EVOL LNG's solution is its ability to work harmoniously and cost-effectively with variable wind and solar generation.

"We are very proud to contribute to this exciting project and support both Horizon Power and the Esperance community to produce reliable, low-emissions power," said Nick.

LNG will be transported from a production facility located in Kwinana, owned by EVOL LNG parent company, Kleenheat, and stored in a custom-built storage and vaporisation facility that can hold enough LNG to power the town for 25 days. LNG is natural gas, the same that is piped into residential homes to power stoves or gas heaters.
